-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP '557.

EP '557 discloses powder coating compositions comprising thermosetting fluorine contain resins and, optionally, silica as an extender pigment (page 7, line 11). The powders produced are taught as having particle sizes of up to 400 um (page 7, line 19). Although, particle sizes for the silica pigment are not explicitly recited, it is well known in the art that silica pigments have particle sizes of typically 10-100 nm as shown by the Katz teaching reference. This size range is seen as less than 1/1000'th of the 400 um upper limit for the powder formulation.

Therefore, it would have been obvious to one of ordinary skill in the art incorporate silica pigment into the powder coat compositions of the reference. This silica would inherently have particle sizes meeting applicants' limitations.
